

IP Whitelisting for Huddle

Customer Datasheet

As part of Huddle's ongoing process to expand our service infrastructure, we intend to extend the list of IP addresses that Huddle is accessed from. For most Huddle customers, this will have no impact and no action will be required. However, some customers may have chosen to lock down the services their employees can access via their corporate network by explicitly whitelisting specific IP addresses that correspond to specific services such as Huddle. If your IT team has done this, then that list of IP addresses will need to be updated. The list of IP's to pass to your IT team is as follows:
